MEMORANDUM

SUBJECT: Cherokee County - Pilot Test, June 20, 1989
Conference Call With PRPs and CH2M Hill

FROM: Glenn Curtis
REMD/SPFD *GMC*

TO: File

A conference call was held with Ken Paulsen, AMAX, Mark Logsdon, Adrian Brown Consultants, Neil Geitner, CH2M Hill, and Glenn Curtis, EPA, to further discuss the pilot test. The EPA stated that the duration of the pilot test could conclude by the time 34 volumes had passed through the flow-through test tanks. This would occur approximately Thursday (June 22, 1989) mid-day. The test could continue at the PRPs' discretion. However, it was stated that the equipment and tanks should remain onsite until analytical data indicating total metals analysis were received. Mark Logsdon informed the group that the Joplin Lab, being utilized for analytical services, had agreed to a two-day turnaround on the metals analysis. This would allow the analytical results to be received beginning Friday (June 23, 1989) with all results being received by Monday (June 26) or Tuesday of the next week. Mark and Ken agreed that this was doable and that Ken would call the PRP representatives to confirm that this would be acceptable to them.

Later in the day, Ken Paulsen called me to give me the consensus of the PRP group. Ken indicated that the other PRPs he had contacted agreed to concluding the test on Thursday, (June 22) leaving the test equipment onsite until data had been assessed, reviewing the data early next week and making a determination regarding equipment dismantling. Ken also stated, that should the equipment/test have to be continued that flexibility in delivering the final report would be needed. We agreed that should the data indicate, the equipment could be dismantled (within one to two days after all parties had received and assessed the data) and that the assessment report would be delivered by the end of the month or very shortly thereafter.
